

# Chemical Cleaning

## In-Place Cleaning Customized for your Process Equipment

**E**vergreen provides state-of-the-art chemical cleaning, removing deposits with proprietary formulations, handling the most difficult cleaning challenges. Samples of deposits are gathered and lab tested to determine the most effective cleaning method.

- Quality cleaning with modern equipment
- Experienced supervisors and technicians
- Safer, quicker and more economical than equipment disassembly
- Easy, effective solution to any fouling problem
- Proprietary specialty chemical formulas and delivery systems

Your Evergreen project manager will consider all factors such as system metallurgy, flow rates, degree of fouling and operational parameters. Using a wide range of selective chemistry including alkalis, acids, inhibitors, wetting agents, sequestrants and organic solvents, we'll choose the optimal chemical formulation for your job.
